RosettaCOURSE®

Rosetta Stone®

New language surrounds learners from the start.

The Rosetta Course platform is the foundation of our language-learning solution –TOTALe® PRO. Learning begins immediately in an immersion environment featuring interactive activities carefully sequenced to build language naturally, without drills or translation. In just a few screens, learners begin speaking complete sentences.

In Rosetta Course, learners connect new language directly to images and meaning, without translation.

## Unique method and systematic structure build language naturally.

Our engaging presentation of sounds, images, and text helps learners absorb meaning intuitively, so learning is natural and rewarding. Up to 5 levels of instruction are available in each language. Each level consists of 4 units, and each unit contains 4 lessons. In each lesson, language is built systematically, with new vocabulary being introduced in the context of language previously learned, strengthening skills and retention.

New language is introduced in core lessons.

Core lessons provide the language-learning foundation.

Core lessons build reading, writing, speaking, and listening skills as they introduce new words and concepts that are later refined in focused activities.

Focused activities refine skills, reinforcing language learned in core lessons.

Focused activities refine specific skills.

Focused activities reinforce language learned in the core lesson while refining more specific parts of language, such as grammar, vocabulary, pronunciation, listening, and other key skills. Along the way, reviews reinforce content mastered in previous activities and lessons.

Focused activities

There are eight focused activities for each lesson, a Review and a Milestone.

The **PRONUNCIATION** activity	focuses on refining pronunciation by prompting learners to speak and compare their own pronunciation to that of a native speaker. As in other activities requiring speech, learners receive both visual and auditory feedback in real-time.
The **VOCABULARY** activity	reinforces language introduced in the core lesson through a combination of images, reading, and listening exercises to help learners retain new vocabulary.
The **GRAMMAR** activity	helps learners focus on the grammatical structures of the language that they are learning in the context of spoken language and written text.
The **READING** activity	connects lifelike imagery and written text to help learners build reading skills in the new language.
The **WRITING** activity	guides learners to type the language being learned, increasing spelling skills while reinforcing new vocabulary.
The **LISTENING** activity	provides added training in listening skills by presenting language learned in the core lesson, focusing on comprehension of the spoken language.
The **LISTENING** and **READING** activity	sharpens comprehension of the spoken and written language by reinforcing content learned throughout the lesson. Content is presented systematically to ensure that listening and reading skills are maximised, preparing the learner for further progress in the language.
The **SPEAKING** activity	enables learners to practise speaking language learned in the core lesson – which helps build speaking confidence. Our proprietary speech-recognition technology guides learners to ensure correct pronunciation.
The **REVIEW** activity	reinforces general content learned in each lesson. Our unique Adaptive Recall™ feature reintroduces Review activities for each lesson with varied frequency based on learner achievement level.
MILESTONES	take place at the end of each unit and simulate real-life conversations. The learner draws from the context presented through words and imagery, and forms questions and responses to keep the conversation going.
