

## Rosetta Stone TruAccent helps employees speak for themselves

Employees gain confidence and perfect their pronunciation with Rosetta Stone TruAccent® speech recognition technology. Each learner's speech is compared to that of thousands of native speakers so that employees can correct and improve.

### Speaking practice reaches new levels

TruAccent increases the quantity and the quality of each language learner's speaking practice. Traditional instruction has time constraints that limit how long and how often a learner can speak their new language in class. Our exclusive speech recognition technology:

- Starts learners speaking from their first lesson
- Provides instant pronunciation feedback
- Encourages practice and refinement
- Becomes a natural part of the new language experience

### Developing speaking confidence

At first, speaking a new language may sound funny. Making a mistake can even leave employees too shy to speak at all. Our accent training technology guides pronunciation without judging, letting employees practice until they're satisfied.

### Every learner's personal speech assistant

TruAccent assists employees whenever and wherever they access the Rosetta Stone® program, including on our award-winning mobile apps, and:

- Motivates employees to reach their proficiency goals
- Guides employees to impeccable pronunciation
- Leaves no syllable behind as learners progress
